§16 Third-Party Integrations

§17 Phased Delivery — SRS vs reality

§18 Open Questions (SRS) — current answers

§19 Addendum — Networks & Action Groups

Phantom features — built, not in SRS

What to do with this audit

SRS v1.1 — Codebase Coverage Audit

Maps every numbered requirement in the canonical SRS

(GPS_Software_Requirements_v1.1.docx, sections 1–18 + Addendum §19) against the codebase as of 1ed6ed8. NFRs (§15) are surfaced as their own table. Phantom features — shipped, but not in the SRS — appear in a final appendix.

Plain-English summary (for non-technical readers)

The SRS is the document the development team was originally given as the blueprint for the GPS platform. This audit checks that blueprint, line by line, against what has actually been built.

Headline: the platform we are building is *not* the platform the SRS describes — and that is mostly intentional, but the SRS has not been updated to reflect those decisions. The SRS imagines a large intelligence-and-campaign system: web crawlers monitoring news and social media, AI generating alerts, automated email campaigns to councillors, a transcription engine for radio and YouTube. What we have actually built so far is a **focused activist coordination feed**: members post calls-to-action, others react, comment, vet, and share via WhatsApp.

Why the difference? Two early decisions (recorded in the project’s decision log as D001 and D002) reframed GPS Action away from “information management” and toward “post-first community coordination.” Most of the SRS’s monitoring and intelligence modules were quietly deprioritised at that point. They are not impossible to add later — many would be third-party integrations rather than ground-up builds — but they are not what the team is building today.

What the SRS still gets right: the audit log, UK data residency, accessibility target, the role-grant model, the WhatsApp share affordance, and the Activist-Mailer link pattern have all shipped largely as specified.

What the SRS misses about reality: roughly fifteen features have shipped that the SRS does not mention at all — the FAB intent picker, comments, reactions, hero images, the cultural-marker visual treatment, the feed-filter chip strip, demo mode, the home-grown feature-flag system, and others. These should be folded into the next version of the SRS.

The four biggest gaps that need a decision soon:

1. **The Councillor Campaign Engine** (SRS §14) is marked URGENT in the spec. Zero of it is built. Either it gets briefed and built, or it gets re-tagged as Phase 2.
2. **Multi-Factor Authentication** (NFR-01) is required but not built; this blocks several other modules that say “MFA-protected”.
3. **The “Network of Networks” scaffolding** in the §19 Addendum (networks table, partner-network tracking, signed enrolment tokens, etc.) was specified as “from day one” Phase 1, but none of it is in the database yet.
4. **The intelligence-gathering and monitoring modules** (SRS §4, §10) are still treated by the SRS as Phase 1 must-haves, even though we have effectively retired them. The spec needs to formally rescope.

Recommendation: the next thing to write is **SRS v1.2**, not more code. Once the spec catches up to the decisions already taken, the audit becomes much shorter and the team can focus its remaining build effort on Module 11 and the Networks scaffolding.

The full table-by-table detail follows.

Status legend

Code	Meaning
✅ Done	Shipped and verified in code or schema
🟡 Partial	Some shipped; bounded gap remains
❌ Not done	Nothing shipped, no decision either way
🔧 Future build	Native build — brief, roadmap row, or parking-lot entry exists
🌐 Future integration	Possible via 3rd-party platform (SendGrid, Whisper, Brightdata, etc.)
🚫 Out of scope	Consciously declined or replaced (cite ADR / parking-lot)

Headline read

The SRS describes an **intelligence-and-campaign platform**: scrapers → alerts → AI-drafted campaigns → councillor engine. The codebase is a **post-first coordination feed** — explicitly reframed by **D001** (“replace WhatsApp coordination with a purpose-built platform”) and **D002** (“post-first, not information-management”). The §19 Addendum part-ratified that drift by introducing Networks and Action Groups, but Modules 1–11 of the body remain almost entirely unshipped.

Read this audit as a **checklist for SRS v1.2** rather than a punch-list for engineering. Many ❌ rows below should probably promote to 🚫 once the spec is rewritten.

§1–2 Purpose & System Overview

§	Requirement	Status	Evidence	Notes
1	Document framed as authoritative spec	🟡	docs/feature-spec/README.md marks v1.1 “Current”	Codebase has materially diverged via D001/D002. SRS v1.2 needed.
2	Venn diagram architecture (Volunteers / R&W / Tech / Coord / Outer reach)	🚫	D001, D002	Outer-reach modules (mass email, talk radio, social removal) were consciously

§	Requirement	Status	Evidence	Notes
2	National + granular regional coordination	🟡	Region hierarchy in schema	scoped out of MVP. Hierarchy modelled; regional access-control intentionally not enforced (D041).
2	AI assistance throughout	🔧	parking-lot “AI provider choice” OPEN	No LLM hooks anywhere yet.

§3 User Roles & Access Control

§	Requirement	Status	Evidence	Notes
3	Super Admin role	🟡	SystemRole.admin (schema:46)	Single admin tier; no GPS-vs-network split.
3	National Coordinator role	❌	—	Not modelled.
3	Regional Volunteer role	🟡	User + UserRegion join	Region tag is informational only per D041 .
3	Subscriber (notification-only public)	❌	—	No public signup yet.
3	Read-Only / Analyst role	❌	—	
3	MFA / 2FA on all accounts	❌	dev-auth cookie only (BU-001-lite)	Pending BU-auth. NFR-01 also pending.
3	Manual admin approval before activation	🟡	User.verifiedAt + BU-requests-vetting	Vetting flow shipped; activation gating not enforced in dev.
3.1	Hierarchical regions (National > Region >	🟡	Region + RegionType (national / region / council)	“Local Authority/ Borough”

§	Requirement	Status	Evidence	Notes
	County > Local)			tier flattened to council.
3.1	Implicit “tick parent → grant children”	✗	—	No region access-control logic at all.
3.1	Free combination of region assignments per volunteer	🟡	UserRegion many-to-many	Affordance exists; not used for filtering.
3.1	Volunteer requests own area	✗	—	
3.1	Alert / queue / calendar feeds filtered by assigned regions	🚫	D041	Conscious divergence — region is tag, not filter.
3.1	Topic filtering (antisemitism / BDS / far-left / NHS / etc.)	🚫	D043	“Groups” replaces “topics” — identity markers, not topic queues. Naming overlap to reconcile in v1.2.

§4 Module 1 — Intelligence Gathering & Monitoring

§	Requirement	Status	Evidence	Notes
4	Continuous monitoring of councils / press / unions / charities / education / public sector / parties / events / socials / video / adversaries	🟡	—	Out of MVP per D001/D002. Possible via Brightdata / Apify / Diffbot + scheduled jobs.
4.1	Admin-managed keyword list	🔧	—	Pre-req for any monitoring module.

§	Requirement	Status	Evidence	Notes
	UI (no code changes)			
4.1	Per-topic keyword groups	🔧	—	
4.1	Entity tracking (named individuals + orgs)	🔧	D-log line 1935 (BU-contact)	Slice 4 entity.
4.2	YouTube channel ingest from configured list	🔮	—	YouTube Data API.
4.2	Whisper transcription of completed videos	🔮	—	Cost model TBD.
4.2	Transcript scanning + flagging	🔧	—	
4.2	Source video links stored alongside transcripts	🔧	—	
4.2	Live transcription	🚫	SRS §4.2 explicit	“Not required for MVP” per spec.
4.3	Alerts auto-generated from matched content	🔧	—	Maps conceptually to Request (type incident / link_submission) — no Alert entity yet.
4.3	Alert metadata (URL / source / date / matched keywords / region / topic / severity / excerpt)	🔧	—	Schema gap.
4.3	Alert routing to regional volunteers + national	🚫	D041	Conscious.
4.3	In-app + email delivery	🟡	Notification (in-app)	In-app polling shipped (D057); email channel not built.

§	Requirement	Status	Evidence	Notes
4.3	"Unassigned" claim queue	✓	Request.status = unclaimed + claim-and-lease	Generic queue shipped (D040, M3a) — would carry alerts when added.

§5 Module 2 — Task & Campaign Management

§	Requirement	Status	Evidence	Notes
5	Monday.com-style task system tailored to GPS	●	Request model	Generic claim-and-lease queue ✓; not the multi-board kanban UX SRS implies.
5.1	Lifecycle Unassigned → In Progress → Under Review → Completed/ Closed	●	RequestStatus enum	Five values today; D054 plans collapse to three.
5.1	Individual or team assignment	✗	—	Single-claimer only.
5.1	Escalation to national team	✗	—	
5.1	Status-change audit log	✓	AuditLog (B07)	Append-only ✓.
5.1	Tasks linked to alerts / campaigns / CRM / outbound comms	✗	—	Linked entities don't exist.
5.2	AI analyses alert + suggests response type	🔧	—	
5.2	AI suggests best method (single email / petition / media alert)	🔧	—	
5.2	AI identifies recipients (council complaint, editor, etc.)	🔧	—	

§	Requirement	Status	Evidence	Notes
5.2	AI pre-populates To/CC/BCC/Subject/Body	🔧	—	
5.2	AI BCCs councillors when target is council-funded	🔧	—	Depends on §14 councillor DB.
5.2	Configurable on-side political-ally rules (admin-overridable)	🔧	—	
5.2	Human approval mandatory before send	✅	NFR-05 satisfied by absence of auto-send	No autonomous send path.
5.3	SMTP / email-provider sending from platform	💜	—	SendGrid / SES / Postmark.
5.3	Activist Mailer mass-send via export	✅	BU-am-link-collapse / D060	URL on Post + auto-collapse to “Send email →” CTA.
5.3	Sentiment management (suppress donate CTA in adversarial mail)	❌	—	
5.3	Donations included in supporter newsletters	❌	—	Newsletter system not built.
19.6	One primary recommended action surfaced per alert (extends §5.2)	🟡	PostKind intent picker	Primary action concept ✓ ; rendering on alerts deferred.
19.6	Ranked secondary actions in detail mode	🔧	parking-lot “Multi-CTA model”	
19.6	Capture primary-vs-secondary choice as ML signal	❌	—	

§6 Module 3 — Volunteer & Contact CRM

§	Requirement	Status	Evidence	Notes
6.1	Volunteer fields (name / email / phone / postcode / regions / topics / role-group / status / skills / training / affiliations)	🟡	User + UserRegion	Postcode/ skills/ training/ affiliations not modelled; D041 dropped postcode + lat/lng.
6.1	Volunteer verifiable before access	🟡	verifiedAt + BU-vetting	Schema + flow ✓; production gating not yet wired.
6.1	Public signup form (name / postcode / email → queue)	🔧	—	Maps to §19.4 enrolment forms — also not built.
6.1	NDA's + IP rights assignment	✗	—	
6.2	Third-party individual records (journalists / politicians / councillors / event organisers / activists)	✗	D-log 1935 (BU-contact Slice 4)	
6.2	Per-individual fields (affiliations / region / track record / linked alerts/ campaigns)	🔧	—	
6.2	Organisation records (type / regions / contacts / funding sources / linked individuals/ alerts)	✗	—	
6.2		✗	—	

§	Requirement	Status	Evidence	Notes
	Full CRM search (region / category / association)			NFR-10 also pending.
19.7	Display name with three options (handle / first / full)	✗	User.displayName only — single field	No policy enum.
19.7	Default = handle (most cautious)	✗	—	
19.7	“Who did what” visibility respects this setting	✗	—	

§7 Module 4 — Petitions

§	Requirement	Status	Evidence	Notes
7	Internal petition creation	🔧	parking-lot “Multi-CTA model”	Schema-ready via Post.linkUrl; native petition entity not built.
7	External hosting (Change.org / 38 Degrees)	💡	parking-lot “Integrations deferred”	API integration deferred.
7	AI petition suggestions from alerts/ content	🔧	—	
7	Petition fields (title/ description/ target/goal/ count/status/ linked campaign/ alert)	🔧	—	
7	AI optimises send-time + audience targeting	🔧	—	
7	Distribution to regional	✗	—	No subscriber list.

§	Requirement	Status	Evidence	Notes
7	volunteers + subscriber list Result data collected, curated, analysed		—	

§8 Module 5 — Content Library

§	Requirement	Status	Evidence	Notes
8	MFA-protected secure repository	✗	—	MFA itself not done (NFR-01, NFR-12).
8	Role-based per-asset access	✗	—	
8	Content types (PDF / DOCX / images / memes / video / audio / fact-sheets / research / surveys / toolkits)		D-log BU–resource Slice 4	
8	Per-asset metadata (title / category / topic / region / date / source / rights)			
8	User-submitted content for admin review	●	RequestType.content_submission enum value	Plumbing scaffolded; UI not shipped.
8	Training-topic submission	✗	—	
8	Incident-report submission	●	RequestType.incident enum	Same as above.
8	AI curation of submissions		—	

§9 Module 6 — Activist Calendar

§	Requirement	Status	Evidence	Notes
9	Shared calendar (GPS / concerning / neutral / deadlines)	✗	—	No Event entity.
9	Colour-coded categories	✗	—	
9	Filter by region / location / date / type	✗	—	
9	AI auto-detection from Eventbrite + event sites + social listings	🔮	—	
9	Auto-alert volunteers on concerning events	✗	—	Depends on alert subsystem.
9	Recommended-response actions on alerts	✗	—	

§10 Module 7 — Media & Broadcast Monitoring

§	Requirement	Status	Evidence	Notes
10.1	Talk-radio station list + broadcast schedules	✗	—	
10.1	Real-time stream transcription	🔮	—	Whisper streaming.
10.1	Volunteer call-in alerts with talking-point briefings	🔧	—	
10.1	Manual broadcast logging	🔧	—	
10.1	Auto-complaints to stations + advertisers + ombudsman	🔧	—	

§	Requirement	Status	Evidence	Notes
	+ revenue sources			
10.1	Network-wide alert hub for radio actions	🔧	—	
10.2	Newspaper + RSS scraping on schedule	💡	—	
10.2	Match → alert queue with suggested response	🔧	—	
10.2	Newswriters digest with pre-drafted templates	🔧	—	“Newspaper” AG (Sharon, §19.5.2) infrastructure ready.
10.2	Cross-AG alert hub for outreach groups	🟡	groupTags [] on Request allows multi-tag	Data shape ✓ ; UX deferred.
10.2	Editor / journalist contacts in CRM, auto-populated in drafts	🔧	BU-contact	

§11 Module 8 — Social Media Tools

§	Requirement	Status	Evidence	Notes
11	AI-generated proactive post suggestions framing adversary agenda	🔧	—	
11	Volunteer review before publish	✅	NFR-05 satisfied by absence of auto-publish	
11	Schedule + publish to GPS-owned TikTok / X / FB / IG	💡	parking-lot “Scheduled publishing” PARKED	
11	Antisemitic-content one-click reporting workflow	🔧	—	
11			—	

§	Requirement	Status	Evidence	Notes
	Public-profile discovery + add-to-CRM for tracking			
19.8	Universal “Send via WhatsApp” affordance		BU-whatsapp-share	wa.me deep link.
19.8	wa.me implementation, no Business API for v1		D016 confirms	
19.8	Same pattern for SMS + email		mailto: shipped (AM CTA); SMS not shipped	
19.8	Posts support multi-AG visibility/ targeting		Post.groupTags []	

§12 Module 9 — Fundraising

§	Requirement	Status	Evidence	Notes
12	Fundraising campaigns (target / raised / donor count / status)		—	
12	Donation buttons embeddable in supporter newsletters		—	Stripe / GoCardless.
12	Suppress donations from complaint / adversarial emails		—	Mirrors §5.3 sentiment rule.
12	Fundraising tasks tracked in task module		—	
12	AI suggests fundraising campaigns + donor segments from CRM		—	

§13 Module 10 — Workshops & Training

§	Requirement	Status	Evidence	Notes
13	Admins create + publish workshop events	✗	—	
13	Region-filterable workshop alerts to verified users + subscribers	✗	—	
13	In-platform sign-up	✗	—	
13	Post-event toolkits in content library	✗	—	Depends on §8.

§14 Module 11 — Councillor Campaign Engine [URGENT]

SRS marks this Phase 1 priority. Zero shipped. Largest single SRS-vs-reality gap.

§	Requirement	Status	Evidence	Notes
14.1	Councillor DB populated from public sources (council sites / Electoral Commission / Democracy Club / moderngov)	✗	—	Schema gap.
14.1	Required fields (name / council + type / ward / party / roles / committees / s151 / s95 / email / phone / profile URL / region)	✗	—	
14.1	Region mapped to GPS hierarchy	✗	—	
14.1	Engagement history per councillor (sent /	✗	—	

§	Requirement	Status	Evidence	Notes
	opened / clicked / pledged / verified)			
14.2	Audience builder with AND/OR filters	🔧	—	
14.2	Filters: geo / party / role+committee / engagement status / council type	🔧	—	
14.2	Live count of matching councillors before send	🔧	—	
14.3	Campaign types Pledge / Agreement / Reply	🔧	—	
14.3	Per-campaign sender name + verified address + reply-to + HTML+text body	🔧	—	
14.3	Merge fields ({{first_name}} etc.)	🔧	—	
14.3	Per-councillor unique pledge link	🔧	—	
14.3	AI draft on demand (human review required)	🔧	—	
14.3	Save as draft + test send to internal address	🔧	—	
14.4	SPF record validated at send time	💡	—	Provider- side.
14.4	DKIM signing + key+selector config per domain	💡	—	
14.4	DMARC at p=none with reporting (recommended quarantine/ reject later)	💡	—	
14.4	Configurable, non-generic sender name	🔧	—	

§	Requirement	Status	Evidence	Notes
14.4	Pre-verified sending addresses managed by admin	🔧	—	
14.4	Independent reply-to per campaign	🔧	—	
14.4	Transactional provider with bounce + complaint handling	💎	—	SendGrid / Postmark / SES.
14.4	Configurable sends-per-hour throttle	🔧	—	
14.4	One-click unsubscribe + auto-suppression	🔧	—	
14.5	Admin UI to add/remove sending domains	🔧	—	
14.5	Generated copy-paste DNS records (SPF / DKIM / DMARC)	🔧	—	
14.5	DNS verification check pass/fail per record	🔧	—	
14.5	Add + verify individual sender addresses	🔧	—	
14.5	Default sender name/email per campaign type	🔧	—	
14.6	Pledge double-confirmation (link → landing → email → verify link)	🔧	—	
14.6	Mobile-friendly landing page	🔧	—	
14.6	Verification expiry (default 7 days, configurable)	🔧	—	
14.7	Tracked events: sent / bounced (hard/soft) / opened / clicked / pledge-	🔧	—	

§	Requirement	Status	Evidence	Notes
	clicked / pledged-not- verified / pledged-and- verified / unsubscribed / complained			
14.7	Open-rate pixel with reliability caveat in reports		—	
14.8	Real-time campaign dashboard (audience / sent / bounce / open / click / pledge / verified)		—	
14.8	Segment-driven follow-up campaigns (e.g. opened- not-pledged)		—	
14.8	Per-councillor history on CRM profile		—	
14.9	Campaign-level reports by party / region / council type / role		—	
14.9	Cross-campaign aggregate reports		—	
14.9	Council / party leaderboard		—	
14.9	CSV / Excel export per councillor engagement		—	NFR-09 too.
14.9	Scheduled email reports to admins		—	
14.10	Post-council escalation (pension funds, fund execs, external auditors, audit engagement leads)		—	

§15 Non-Functional Requirements

ID	Requirement	Priority	Status	Evidence	Notes
NFR-01	MFA / 2FA for all accounts (TOTP minimum)	High	✗	dev cookie only (BU-001-lite)	BU-auth not yet briefed. Blocks NFR-12 + Module 8 + 11 + 14.
NFR-02	RBAC restricting visibility to authorised regions + functions	High	🟡	RoleGrant + scoped queue_manager:* (D055)	RBAC plumbing ✓; region-based access intentionally absent (D041).
NFR-03	Data stored in UK or EEA (GDPR)	High	✅	AWS RDS eu-west-2 (D004)	Documented in CLAUDE.md stack section.
NFR-04	Standard browser + mobile-responsive	High	✅	PWA, design system, WCAG 2.2 AA (D034)	
NFR-05	All AI content labelled + human-approved (no autonomous send)	High	✅	Compliance-by-default (no AI hooks exist)	Will need re-checking when LLM hooks land.
NFR-06	Full audit log of all actions	High	🟡	AuditLog model (B07), append-only	Coverage grows per BU; not yet exhaustive across all routers.
NFR-07	Configurable scrape / monitor schedule	Medium	✗	—	No scrape jobs exist.
NFR-08	Scale to 500 concurrent volunteers	Medium	🔧	—	Untested; engineering-roadmap will surface load testing.
NFR-09	CSV / Excel export from CRM / alerts / campaigns	Medium	✗	—	
NFR-10	Full-text search across records /	Medium	🔧	BU-search-surface planned	Member search first; broader search later.

ID	Requirement	Priority	Status	Evidence	Notes
NFR-11	alerts / transcripts / CRM SMTP + OAuth Gmail/ Outlook integration	Medium	🔮	—	
NFR-12	Content-library MFA + RBAC separate from main login	High	❌	—	Depends on NFR-01.

§16 Third-Party Integrations

Integration	Priority	Status	Notes
AI / LLM (GPT-4o / Claude)	High	🔮	parking-lot “AI provider choice” OPEN.
Speech-to-text (Whisper)	High	🔮	
Email provider (SMTP / SendGrid / Mailgun)	High	🔮	
Activist Mailer (export)	Medium	✅	Post.activistMailerUrl + AM-link collapse.
Activist Mailer (API)	Medium	🔮	parking-lot “Integrations deferred”.
YouTube Data API	High	🔮	
Social media APIs (X / FB / IG)	Medium	🔮	Auto-posting via unofficial WhatsApp APIs explicitly DECLINED (parking-lot).
Eventbrite API / scrape	Medium	🔮	
Payment gateway (Stripe / GoCardless)	Medium	🔮	Depends on §12.
Democracy Club / council sites	High (§14)	🔮	
Transactional email (Postmark /	High (§14)	🔮	

Integration	Priority	Status	Notes
SendGrid + DKIM/SPF)			

§17 Phased Delivery — SRS vs reality

SRS Phase	SRS Item	Status
1	MFA + RBAC + geo permissions	✗
1	Web scraping (council / press / YouTube + transcription)	✗
1	Alert feed with regional routing + email	✗
1	Basic task management	🟡 (Request queue, not Monday-style)
1	Volunteer CRM + approval workflow	🟡 (vetting flow shipped; full profile not modelled)
1	AI-assisted email drafting	✗
1	Content library with access control	✗
1	Module 11 Councillor Campaign Engine [URGENT]	✗
2	Full alert→task→outbound flow	✗
2	Petitions + AI suggestion	✗
2	Activist calendar + scrape	✗
2	Newsriters workflow + media CRM	✗
2	Talk radio monitoring	✗
2	Subscriber sign-up + verification	✗
3	Social publishing + monitoring	🟡 (WhatsApp share shipped)
3	Fundraising + payment	✗
3	Workshops / training	✗
3	Activist Mailer API	🟡
3	Advanced reporting / analytics	✗
3	Full audit logging + compliance tooling	

SRS Phase	SRS Item	Status
		🟡 (audit log primitive ✓)

Interpretation: SRS §17 has been silently superseded by `bu-sequence.md`. SRS v1.2 should rewrite §17, not the codebase.

§18 Open Questions (SRS) — current answers

Q	Status	Source
AI / LLM provider	OPEN	parking-lot “AI provider choice”
Monolith vs microservices	OPEN (lean: modular monolith)	parking-lot
Cloud hosting	RESOLVED	D004 — AWS eu-west-2
AM API vs export for Phase 1	RESOLVED	export shipped (D060); API parked
Volunteer-volume target (launch + 12mo)	OPEN	—
Content library subdomain vs integrated	OPEN	—
GDPR / Charity Commission compliance sign-off	OPEN	—

§19 Addendum — Networks & Action Groups

The Addendum *amends* §17 and is meant to be Phase 1. Schema check follows.

19.1 Network of Networks

§	Requirement	Status	Evidence	Notes
19.1.1	networks table (flat)	✗	absent from schema	Hard schema gap.
19.1.1	is_master boolean + partial unique index (single master)	✗	—	
19.1.1	parent_network_id FK to GPS row	✗	—	
19.1.2	User.home_network_id FK	✗	schema:119–179	
19.1.2		🚫	SRS itself defers	—

§	Requirement	Status	Evidence	Notes
	volunteer_networks junction (deferred per §19.9.2)			
19.1.3	originating_network_id on alerts / tasks / posts / content (from day one)	✗	Post, Request schema	Hard gap; spec is explicit “from day one”.
19.1.4	Per-volunteer network badge (post attribution)	✗	—	
19.1.4	GPS chrome stays GPS-branded (no white-label)	✓	by absence	Aligned.

19.2 Role table amendments

§	Requirement	Status	Evidence	Notes
19.2	ADD Network Coordinator role	✗	—	Not modelled.
19.2	network_coordinators junction (Alistair → CUI)	✗	—	
19.2	Aggregate-stats-only visibility scoping for Coords	✗	—	
19.2	REMOVE Gatekeeper role	✓	never built	Aligned by absence.
19.2	CHANGE Vetting Team → is_vetter flag on User	✗	currently inferred from RoleGrant of queue_manager:vetting (D055)	Functional equivalence, but column not added.
19.2	vetting_scope field (all / specific network ID)	✗	—	

19.3 Default visibility

§	Requirement	Status	Evidence	Notes
19.3	Open coordination across networks + AGs by default	✓	D041, D043	Aligned by accident — but aligned.
19.3	Coordinators see aggregate stats only	✗	—	Coord role not built.
19.3	Restrictions added	✓	D041, D043	Aligned.

§	Requirement	Status	Evidence	Notes
	explicitly, not by default			

19.4 Enrolment routing

§	Requirement	Status	Evidence	Notes
19.4	Three form variants (direct / partner-locked / open)	✗	—	
19.4	Pre-filled-and-locked network field with visible caption	✗	—	
19.4	Signed enrolment tokens preventing spoofing	✗	—	
19.4	Vetting team can override network field before approval	✗	—	Depends on home_network_id existing.

19.5 Action Groups

§	Requirement	Status	Evidence	Notes
19.5	AGs as tag/filter, not permission boundary	✓ (under “Group” name)	Group model (schema:579–599); groupTags[] on Post + Request	Implemented under different naming. Reconcile in v1.2.
19.5	Volunteers can belong to multiple AGs	✓	GroupMembership join	
19.5	AG Leader as per-AG flag, not global role	✓	GroupMembershipRole.lead	
19.5	Posts / alerts can be tagged with one or many AGs at creation	✓	Post.groupTags[], Request.groupTags[]	
19.5	Default feed view = “my	✗	—	Public-first feed per

§	Requirement	Status	Evidence	Notes
	AGs”, widen to all			D045. BU-feed-filter (in flight) does NOT include “my groups” chip.
19.5.1	Cross-AG forwarding via re-tagging	🟡	groupTags String[]	Schema-ready; one-click “also send to” UI not built.
19.5.1	Shared record model (one row, shared status/ assignee)	✅	single row + array tag	Correct by data shape.
19.5.2	Initial AG leadership seed (Petitions/ Calls/Mass Email = Tabatha; Newspaper = Sharon; Radio = TBC)	❌	prisma/seed.ts	Not seeded.

19.6 Primary + secondary actions — covered under §5 above.

19.7 Identity & display name — covered under §6 above.

19.8 WhatsApp share — covered under §11 above.

19.9 Phase 1 scope updates

§	Requirement	Status	Evidence	Notes
19.9.1	Network Coordinator role + junction (Alistair → CUFI)	❌	—	
19.9.1	Minimum-viable Coord dashboard (aggregate counts only)	❌	—	
19.9.1	Co-branded enrolment landing for CUFI	❌	—	
19.9.1	Three enrolment form variants	❌	—	
19.9.1	Signed enrolment tokens	❌	—	
19.9.1	Action Group tagging on alerts / posts / tasks	✅		Alerts not yet a

§	Requirement	Status	Evidence	Notes
			groupTags [] on Post + Request	separate entity.
19.9.1	originating_network_id columns scaffolded on relevant tables	✗	—	
19.9.1	is_vetter + vetting_scope scaffolded	✗	—	
19.9.2	Phase 2 deferrals (delegated vetting UI / multi-network membership / per-Coord analytics / network- scoped messaging)	✓ (deferred per spec)	—	Aligned.

Bottom line on §19: the Action-Group half (§19.5) is materially built under the name “Group”. The Networks half (§19.1–19.4) has zero schema scaffolding despite being explicit Phase 1. Highest-priority concrete gap below Module 11.

Phantom features — built, not in SRS

New (post-SRS — likely v1.2 absorption candidates)

Feature	Brief / ADR	Notes
FAB intent picker (composer cards)	BU-fab-intent-picker / D044, D062	Replaces “post a thing” with intent-led tile selector.
AM-link auto-detection + collapse to CTA	BU-am-link-collapse / D060	Activist Mailer URL pasted → preview with “Send email →”.
Reactions (8-emoji curated set)	BU-reactions / D050, D032	Quiet appreciation primitive.
Comments (post + request, polymorphic)	BU-comments / D052	Flat thread; @mentions trigger notifications.
Tick-or-cross post kind	BU-tick-or-cross / D069	Author amplify-or-flag with WhatsApp handoff.
Cultural-marker bordeaux treatment	D033	Shabbat / remembrance posts get distinct register.
Hero images (curated allow-list)	BU-post-hero-demo / D064	Member-picked from seeded set; full upload deferred (D046).
URL-driven feed-filter chip strip	BU-feed-filter (in flight) D036	All / Urgent / Now / Meetings / Events.

Feature	Brief / ADR	Notes
FeatureFlag DB table + audit-on-flip		Homegrown rollout / kill-switch / pilot-gate. Not in SRS NFRs.
Demo mode (Vercel preview unlock)	BU-demo-mode	Not in SRS.
Sticky bottom nav	BU-sticky-nav	UX detail not in SRS.
Brief-status traceability (@spec / @bu / @adr annotations + trace script)	F13 / D038	Eng discipline.
Honest-tracking-only commitment	D047	Reach numbers never inflated.
Self-dispatch as default (vs SRS dispatch-queue framing)	D013, D016	Conscious divergence from §5 task- assignment model.

Done (also in SRS — worth confirming)

Feature	SRS §	Notes
Activist Mailer export- via-link	§5.3 / §16	Counts as AM “copy- paste export”.
WhatsApp share affordance	§19.8	wa.me deep link.
Audit log primitive	NFR-06 / B07	Append-only, immutable.
Region hierarchy modelling	§3.1	Hierarchy ✓ ; access- control divergence (D041).
Soft-delete + role-grant audit chain	NFR-06 / D042	
WCAG 2.2 AA target	NFR-04 / D034	
UK data residency (RDS eu-west-2)	NFR-03 / D004	

What to do with this audit

The four highest-priority gaps to either build or formally retire from spec:

1. **§14 Module 11 (Councillor Campaign Engine)** — SRS-marked URGENT. Zero shipped. Decide: brief now or move to Phase 2 in v1.2.
2. **§19.1–19.4 Networks scaffolding** — networks, home_network_id, originating_network_id, is_vetter, vetting_scope, enrolment-form variants, signed tokens. The Addendum mandates these “from day one”; codebase has none of them.
3. **NFR-01 (MFA)** — every section saying “MFA-protected” depends on this. BU-auth not yet briefed.

4. **§4 Module 1 (Intelligence Gathering)** — explicit reframe via D001/D002 has effectively retired this from MVP, but SRS still treats it as Phase 1 spine. v1.2 should formally retire-or-rescope.

Suggested SRS v1.2 work:

- Absorb D001/D002 reframe into §1–2.
- Merge Addendum §19 into the body.
- Reconcile “Action Groups” vs “Groups” naming (D043).
- Move unshipped Phase 1 modules (§4, §14) into a clearly-labelled future-state appendix or rescope.
- Re-anchor §17 phasing to `bu-sequence.md`.
- Capture phantom features (above) as new sub-sections under the right modules.
